

## **Peripeti**

### **Open Access Statement**

*The following concerns all Peripeti publications from 2024, nr. 39, and later:*

Peripeti is a diamond open access journal providing immediate open access to its content on the principle that making research freely available to the public supports a greater global exchange of knowledge.

Authors are not charged for submission, review or publication of articles.

Authors contributing to *Peripeti* retain copyright to their articles.

Authors agree to publish articles under a [Creative Commons CC-BY-NC 4.0 License](#). The terms of this license permit users to freely copy and redistribute the material in any medium or format, and to adapt, transform, and build upon the material, as long as appropriate credit is given, a link to the license is provided, and any changes made are indicated. Users are not allowed to share or adapt the material for commercial purposes without consent from the licensor. The use of the licence must not in any way suggest that the licensor endorses the third party or their use. The license cannot be revoked.

Authors are encouraged to post their articles to personal and/or institutional websites to ensure even greater public access after publication. Authors have the right to archive their articles in public institutional or funding provider repositories, however, Peripeti requests that authors post a direct link to the published article on the journal's website whenever possible, since Peripeti, as a non-commercial, publicly funded publisher, is reliant on the level of user activity on the journal's website.

*Regarding earlier publications, until 2024, including nr. 38:*

Copyright is shared between Peripeti and the author(s). The journal is an open access journal that provides instant access to all content based on the principle that making research freely available to the public supports a greater global exchange of knowledge. Users are free to copy and share material in any medium or format as long as appropriate credit is given. Any other use requires the written consent of the copyright holders.
